

# SIMDASH-ELITE 4.3 | USER MANUAL

Thank you for ordering the SIMDASH-ELITE 4.3 Inch Simracing dashboard!

---

## 1. Mounting the dashboard

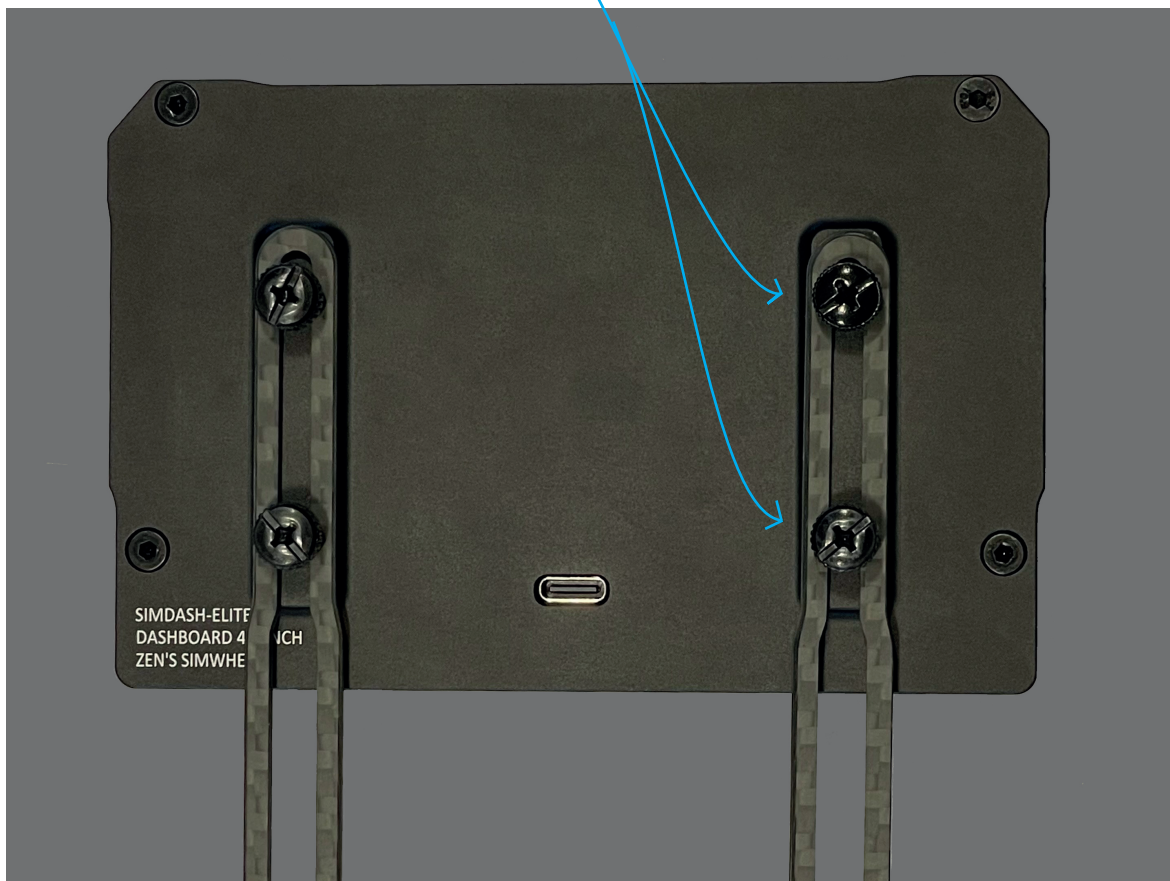

The package contains 2x Carbon brackets, 4x M4 Screws, 2x M5 and 2xM6 bolts.

First step is to mount the carbon brackets onto the Dashboard using the M4 Screws.

You can either use 2 or 4 screws, when using 2 screws, you can rotate the carbon brackets on the bottom holes, or top holes. This way it can be more easy to align the brackets to the holes where you mount the dashboard.

It is important to use the correct size bolts to mount the carbon brackets onto your wheelbase or other place on your setup.

A mounting example can be seen below:

## 2. Connecting the dashboard

This dashboard is connected through the provided USB-C Cable.

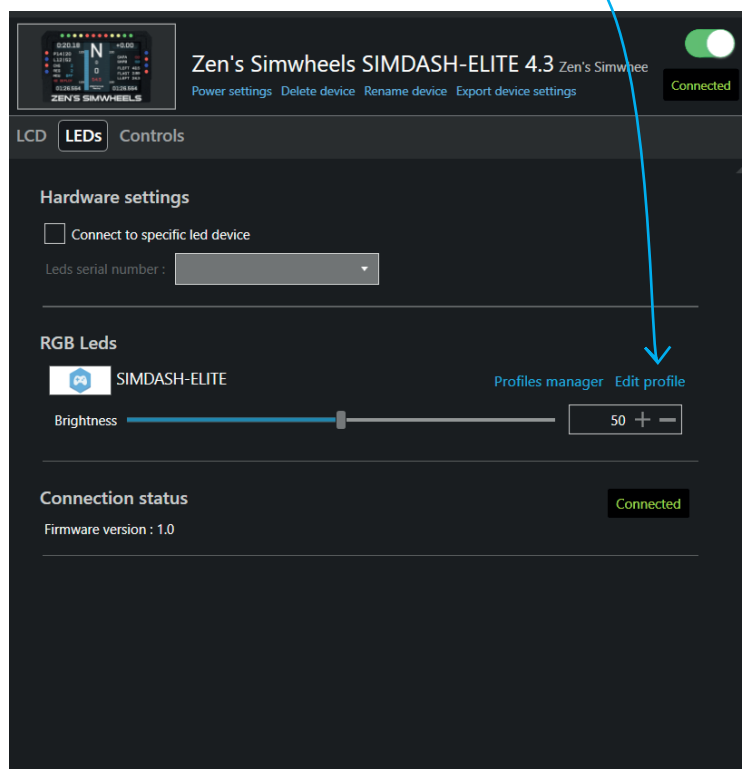

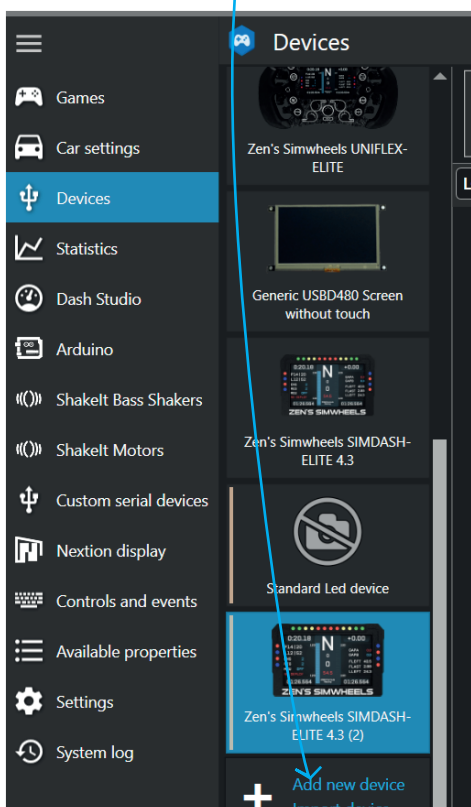

You can rotate and connect the USB-C Connector on both ways, find the best position suited for your setup.

When plugging the dashboard into your pc, It may need USB480 Drivers which will be available when installing the dash in Simhub.

Download simhub here: <https://www.simhubdash.com/download-2/>  
(Version 9.0.2 Minimum)

Go to Devices -> Add new device -> look for SIMDASH-ELITE 4.3 and add the device

On this page you can change your dashes and Leds profiles and effects, click on 'Edit profile' to edit LED effects and groups
